

Stage Netherlands + Spain

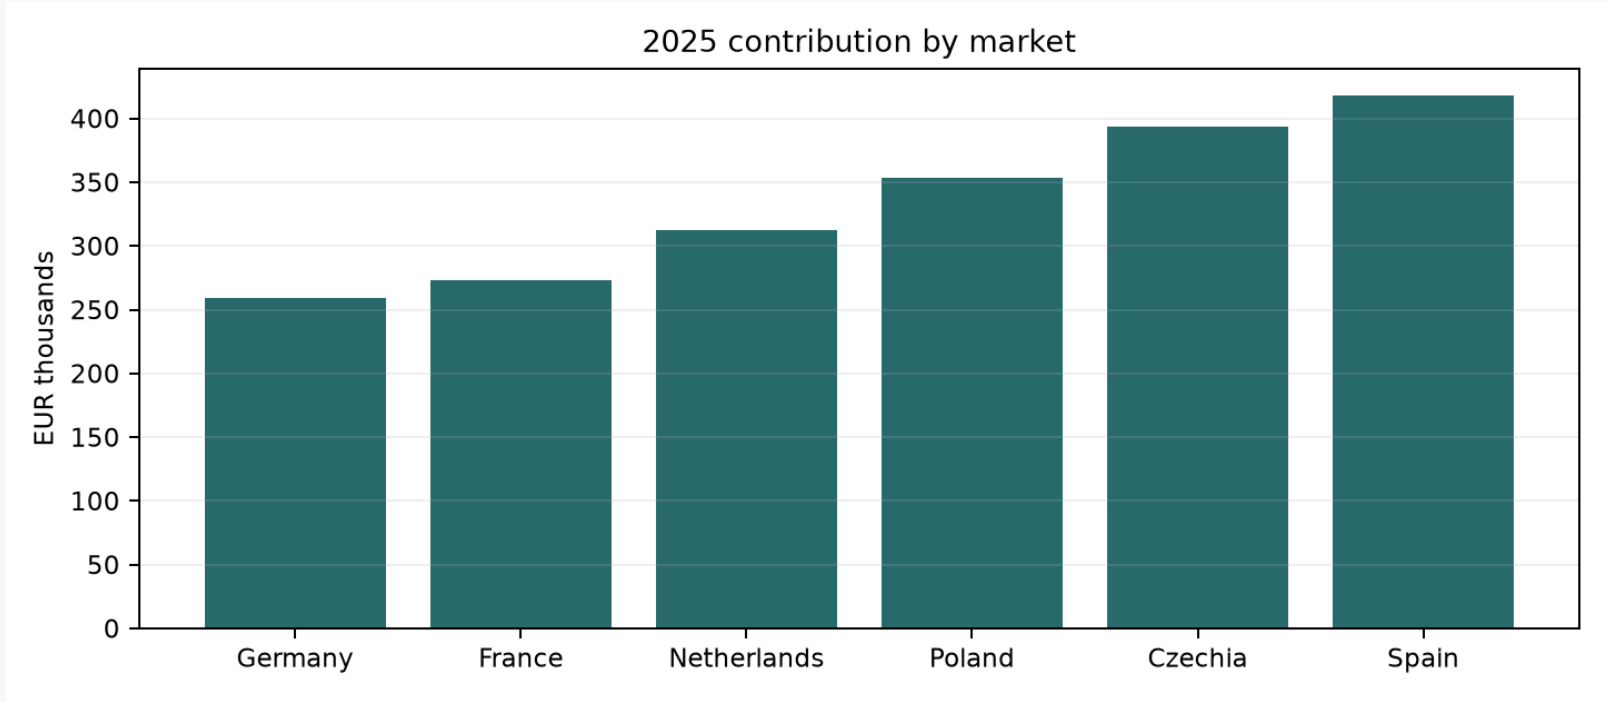

90-day validation before site commitment

Recommendation

- EUR 268k base annual increment; EUR 209k under defined stress
- EUR 270k year-zero capex and six FTE
- Gives up EUR 16k base vs Czechia + Spain, but retains EUR 197k more under stress
- Release capex only if verified downside stays positive and payback is at most three years

Observed 2025 contribution

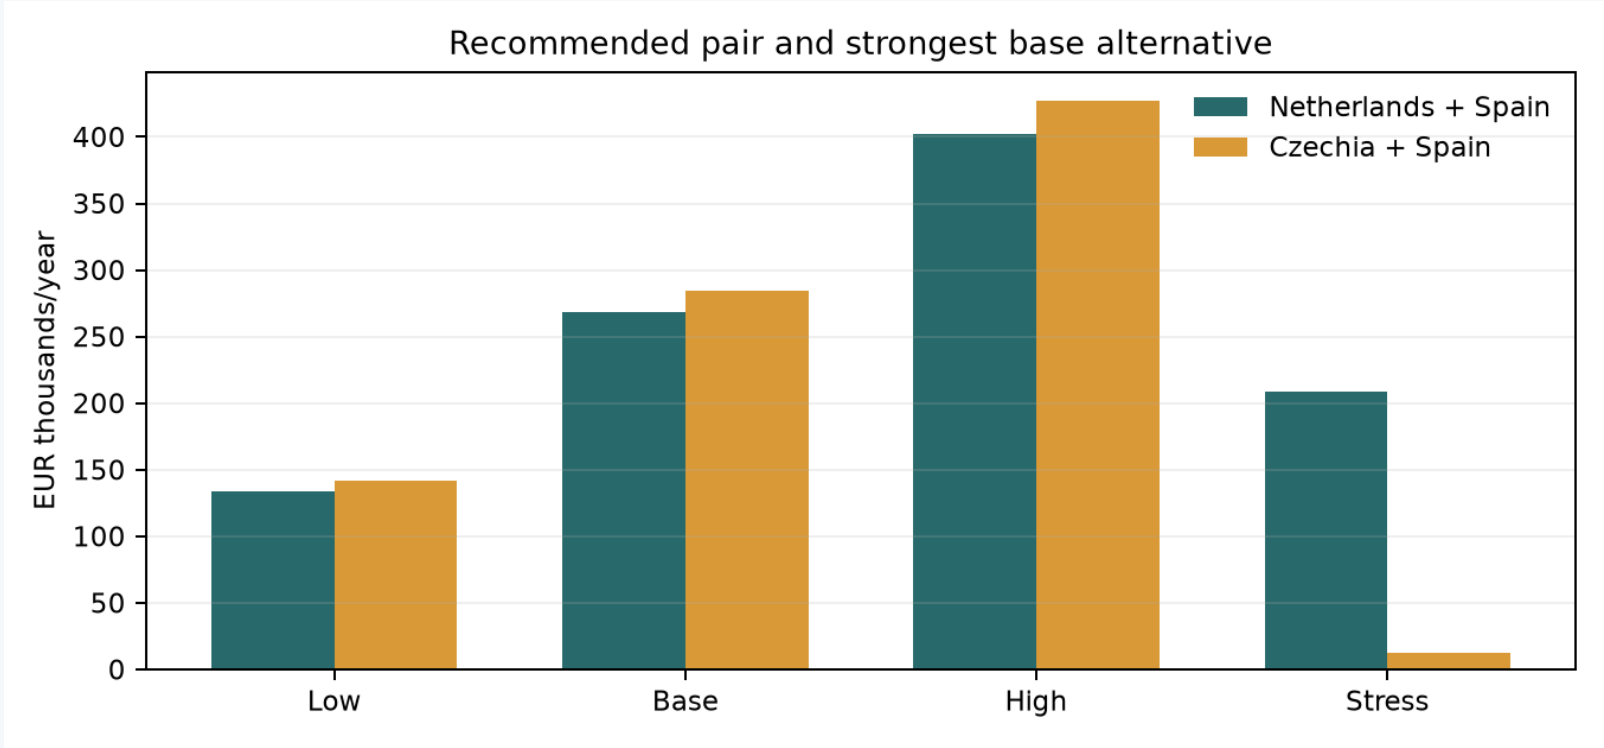

1,254 eligible orders | 80,436 shipped units | returns through 31 January 2026

- Spain: EUR 418k
- Czechia: EUR 394k
- Poland: EUR 353k

Downside changes the pair ranking

Client-defined scenarios; no probability assigned

- NL + ES: EUR 268k base / EUR 209k stress
- CZ + ES: EUR 284k base / EUR 12k stress
- CZ stress includes 10% CZK shock on net sales

Trade-off and switch conditions

Hard limits: EUR 450k capex | seven FTE | at most two hubs

- NL + ES uses EUR 45k more capex and one more FTE than CZ + ES
- CZ + ES leads stress if the CZK shock is below about 0.55%
- If the board prioritizes base output, CZ + ES is strongest; if validation fails, defer
- Stress is scenario arithmetic, not probability or forecast

90-day gates keep the choice reversible

Owners are roles; assign named accountable people at kickoff

Days 0–15

COO + Finance

Reconcile baseline and capture service KPIs

Days 16–45

Commercial + Ops

Access customer/carrier data; verify demand, service and savings

Days 46–70

Finance + HR + Legal

After Gate 1: full costs, local diligence; downside >0; payback $\leq 3y$

Days 71–90

COO + Board sponsor

After Gate 2, commit only if evidence passes; else defer

KPI scorecard

Weekly by country/SKU against measured pre-pilot baseline

- Delivery median and P90: at least 20% reduction by day 90
- On-time-in-full: +5 percentage points; returns: no more than +0.5 points
- Realized savings: at least EUR 3.10/unit; downside contribution remains positive
- Data quality: zero unresolved orphan/revision exceptions

Evidence boundary

Inputs, public observations and model limits

- Orders, returns, costs and hub assumptions are synthetic client data
- Official archived ECB 2025 rates and World Bank 2022–24 observations
- Population/GDP provide context, not proof of parts demand
- No causal effect, discounting, ramp, tax or working-capital model
