

Authorize a gated CZE + ESP decision case

Board recommendation • decision basis is synthetic 2025 exports plus archived public context

Approve conditional preparation for two hubs in Czechia and Spain. Reserve €225k year-zero capex and five FTE; do not release lease or fit-out commitments until the 90-day gates confirm the operating case.

BASE ANNUAL INCREMENT

€198,099

after €95k recurring fixed cost

JOINT STRESS

€32,180

25% volume + return / FX shock

SIMPLE PAYBACK

1.14 years

no ramp or discounting

CAPACITY USED

€225k / 5 FTE

€450k / 7 FTE ceiling

Decision condition: demonstrate $\geq 25\%$ annual volume uplift and €2.10/unit CZE + €3.00/unit ESP savings from actual route and handling evidence. If either fails, defer; the modeled stress cushion is only €32,180/year.

Scenario ranking is not causal evidence. Synthetic client exports were not accessed from a live account; no customer interviews were conducted.

2025 base: Spain and Czechia lead the synthetic ledger

1,254 eligible orders • 77,436 units • €4.384m net sales • €2.030m contribution (46.3% of net sales)

Market	Units	Contribution	Margin
DEU	12,153	€262,366	41.9%
FRA	11,880	€276,271	43.7%
NLD	12,576	€315,644	45.2%
POL	13,163	€356,494	46.8%
CZE	13,733	€397,335	48.7%
ESP	13,931	€421,900	49.6%

All six countries contain exactly 209 eligible orders in this synthetic generation. Differences are in units, product mix, refunds, cost and pricing—not a demonstrated local demand advantage.

CZE + ESP ranks first among 17 feasible choices

Low / base / high are 10% / 25% / 40% volume uplift; annual fixed cost is deducted, capex is separate

CZE + ESP

198k base | 32k stress | €225k / 5 FTE

POL + ESP

186k base | 29k stress | €240k / 6 FTE

POL + CZE

179k base | -79k stress | €205k / 5 FTE

NLD + ESP

167k base | 108k stress | €270k / 6 FTE

Only additive economics; no pair synergy. Four pairs are infeasible on FTE and/or capex. DEU + FRA also exceeds the capex limit.

The modeled stress is positive, with limited room for execution error

CZE + ESP returns and capex shown in year-zero / steady-state terms

LOW ANNUAL INCREMENT

€64,619

10% volume uplift

BASE ANNUAL INCREMENT

€198,099

25% volume uplift

STRESS ANNUAL INCREMENT

€32,180

25% + refund shock; no added recovery

Why not Poland + Spain?

The strongest alternative is €186,329/year base, €15k more capex and one more FTE. CZE + ESP is about €11,770/year higher in base and €2,916/year higher in stress. Stress includes a €81,531 CZK haircut for Czech net sales in CZE + ESP (Spain is EUR); POL + CZE receives a €157,720 combined PLN/CZK haircut.

Decision pivot

Break-even uplift is ≈2.7% if the savings and €95k recurring fixed cost hold. Those terms are synthetic assumptions. Require a validated ≥25% case and actual savings of €2.10/unit in CZE and €3.00/unit in ESP; otherwise defer. Stress cushion: €32,180/year.

Major unmodeled risks: site and labor cost overruns, ramp/working capital, service mix, returns quality, customer geography, lead-time effect, taxes and discounting. ECB reference FX is not transaction FX; WB macro series is context, not demand evidence.

90-day plan makes the decision reversible until evidence arrives

Named owners, dependencies and gates; no irreversible lease before the first two gates

0–30 days | Validate

COO • CFO • Commercial Ops

Rebuild actual route/catchment baseline; verify current fulfillment cost, candidate rent, staffing, demand and returns. Needs real, non-synthetic operating data.

Gate 1: CFO signs $\geq 25\%$ uplift case; savings $\geq \text{€}2.10$ CZE / $\text{€}3.00$ ESP per unit; recurring cost $\leq \text{€}95\text{k/y}$ combined. Else defer.

31–60 days | Pilot / design

Regional Ops • Procurement • HR • IT

Pilot route consolidation or local stock positioning; measure service, cost/unit, inventory and returns; secure conditional site/staff quotes.

Gate 2: COO + CFO confirm positive defined stress after quoted costs; compliance and service design pass. Release pilot/design only.

61–90 days | Commit readiness

COO • CFO • Quality • IT

Fit-out design, recruitment, inventory placement, provider SLA, returns process, instrumentation and local compliance.

Gate 3: Board sponsor releases capex only within $\text{€}225\text{k}$ / 5 FTE envelope and with KPIs live. Else pause.

Weekly/monthly KPIs: volume uplift $\geq 25\%$; net saved cost $\geq$ option assumptions; contribution after recurring cost positive in low and stress; order-to-delivery P90 improves ≥ 1 day and OTIF $\geq 5\text{pp}$ vs 4-week matched baseline; refund rate not worse; capex $\leq \text{€}225\text{k}$ and staffing ≤ 5 FTE.

Decision rests on synthetic assumptions and archived sources

Sources, limits and decision materials

Client data (synthetic)

Orders, corrections, returns, effective unit cost, hub options and scenario policy were collected from the local frozen source room. Data dictionary determines grain/revisions and contribution. No live customer account, interview or service-level source was accessed. Raw files and SHA-256 hashes are included.

Official archived observations

ECB daily historical reference rates: 2025 arithmetic business-day means, local currency per EUR. World Bank population and GDP per capita: 2022–2024 archived API responses, archive metadata last updated 13 July 2026. Population is persons; GDPpc is current US dollars/person.
