

Reserve Czechia + Spain; release capital in stages

BASE ANNUAL INCREMENT

€198,099

After €95,000 recurring fixed cost

YEAR-ZERO CAPEX

€225,000

50% of the €450,000 ceiling

HUB STAFFING

5 FTE

Two hubs; two FTE headroom

Start with Spain. Release Czechia after validating demand, net savings and FX exposure.

Low: €64,619/year • High: €331,580/year • Stress: €32,180/year

Base simple payback: 1.14 years at steady state; first-year ramp is unmodeled.

Provisional recommendation. Uplift and saving assumptions are synthetic; no measured causal effect or forecast probability.

Sources: hub-options.csv; scenario-policy.md; reconciled 2025 order ledger. Report pp. 1, 5–7; workbook Scenarios / Portfolios.

Contribution supports the choice; population does not

€4.384m net sales
€2.030m contribution
46.3% margin

1,254 orders • 77,436 units
All six markets: 209 orders.

CZE+ESP produce 40.4% of total contribution.

Country economics reflect volume, price/mix, returns and costs. Czechia's returned-unit rate is 2.10%; Spain's is 1.81%. Track mature shipment cohorts in the pilot.

Sources: order extracts and corrections; returns; effective-dated unit costs; archived ECB. Report pp. 2-3; workbook Monthly / Countries.

Czechia + Spain wins normal cases; NLD protects stress

CZE + ESP

€225k capex / 5 FTE
 Base €198.1k/year
 Stress €32.2k/year

NLD + ESP

€270k capex / 6 FTE
 Base €166.9k/year
 Stress €107.6k/year

No probabilities assigned.
 Maximin across these four cases selects
 NLD+ESP.

Source: required scenario policy; capex is separate from annual contribution. All 11 feasible pairs, six singles and defer are in report p. 6 / workbook.

The feasible frontier fits well inside the capital ceiling

Portfolio	Capex	FTE	Base / year	Stress / year	Base PB yrs
CZE+ESP	€225,000	5	€198,099	€32,180	1.14
POL+ESP	€240,000	6	€186,329	€29,264	1.29
NLD+ESP	€270,000	6	€166,931	€107,630	1.62
ESP	€130,000	3	€102,716	€70,007	1.27
DEFER	€0	0	€0	€0	—

CZE+ESP dominates the base runner-up POL+ESP: more contribution in all four cases, €15k less capex and one fewer FTE.

Versus NLD+ESP, accept €75.5k less annual contribution in stress for €31.2k more base contribution, €45k less capex and one fewer FTE. A stronger downside preference changes the choice.

Hard constraints: $\leq$ €450,000 capex; $\leq$ 7 FTE; $\leq$ 2 hubs. Four DEU pairs fail constraints. Source: hub-options.csv and portfolio model.

Public context is useful—but it is not demand evidence

Market	Population 2024	Change 2022-24	GDP/person 2024
Germany	83.52m	0.41%	\$56,104
France	68.55m	0.54%	\$46,103
Netherlands	17.99m	1.65%	\$67,465
Poland	36.56m	-0.71%	\$25,104
Czechia	10.91m	2.18%	\$31,828
Spain	48.85m	2.22%	\$35,327

Germany and France offer population scale; the Netherlands has higher GDP per capita. The client’s contribution ranking differs. Product installed base, service needs and qualified pipeline remain unmeasured.

Current US\$ is neither PPP nor real income. No null observations in the 18 country-years; historical values can be revised.

World Bank archived APIs SP.POP.TOTL / NY.GDP.PCAP.CD. Retrieved 2026-09-27; source lastupdated 2026-07-13. Report p. 4.

Demand, FX and saving scope can change the second hub

CZE DEMAND THRESHOLD

~17.7% uplift

Matches NLD held at 25%; normal FX

CZE FX SWITCH

~2.6% haircut

Of net sales; with 3% gross refund shock

ZERO-UPLIFT PAIR

–€24,368/year

CZE+ESP, normal FX and client savings

Saving scope is unverified

All supplied savings exceed actual fulfillment cost per unit. Validate other savings and local costs.

Cap savings at fulfillment and add stress:
CZE+ESP falls to –€1,588/year; NLD+ESP stays +€54,211.

Source: required scenarios plus separate analyst boundary tests. Thresholds change if costs/savings change. Full precision: workbook Switching values.

Reconciliation is complete; hub impact is unverified

Checked or computed	Result	Material limit
Orders and corrections	1,328 rows → 1,254 eligible orders	13 duplicates; 18 old revisions; 43 eligibility exclusions
Returns through 31 Jan 2026	264 rows → 241 included return IDs	Orphan quarantined; late credit excluded; later returns censored
Free shipments and cost recovery	12 free orders retained; 481 restocked units	Costs retained; no recovery for 600 un-restocked returned units
Official archives	Hashes match; 12 means per currency; 18 WB country-years	Archive collection, not live research; FX is analytical translation
Hub impact / investment cash	Model arithmetic, not observed effect	Demand, savings, ramp, working capital and site quotes unverified

Booked cohort revenue is not cash. Contribution deducts product and fulfillment costs; hub recurring costs enter scenarios, and capex remains a separate year-zero investment.

Source: data-dictionary.md and raw audit files. No interviews or client account access. Report pp. 3, 10–12; full register with hashes supplied.

Five gates protect the investment envelope

When / owner	Work and dependency	Gate
1–15 days CFO + data lead	Reconcile; baseline service and FX exposure; all-in cash plan	A: finance/quality sign-off; capex and working capital known
16–30 days COO + Procurement	Quotes, net saving bridge, pipeline; depends on A	B: Spain $\leq$ €130k / 3 FTE; validated low case positive
31–60 days Spain lead + IT + HR	Limited SKU pilot; trained staff, system and stock ready	C: $\geq$ 95% one-day dispatch; $\geq$ 99% stock accuracy
61–75 days CFO + Commercial + Treasury	Update demand, return cohorts and FX; compare NLD	D: select CZE, NLD or defer the second site
76–90 days COO + board sponsor	Contract / prepare second site only if gate passes	E: positive updated increment, budget/FTE fit, KPI ownership

If cohort maturity or seasonality prevents a fair decision, retain Spain only. A 90-day pilot can test readiness and unit cost; it cannot establish a sustained 25% demand effect.

Owners, timing and service targets are consultant proposals. Dependencies can delay opening. Report pp. 8–9 contains staffing, KPI definitions and risk owners.

Track contribution, service and capital

Measure / cadence	Owner	Target or decision use
Contribution bridge / monthly	CFO	Actual + annualized run rate vs central-service comparison; positive validated low case
Demand and mix / weekly	Commercial	Season-matched units; test 25% assumption and Czech selection threshold
Net saving per unit / weekly	Procurement + Finance	Invoice-supported saving bridge; do not assume €2.10 CZE / €3.00 ESP
Age-matched returns / monthly	Quality lead	CZE baseline 2.10%, ESP 1.81%; proposed alert +0.5 percentage points
Dispatch and inventory / weekly	Operations	Proposed $\geq 95\%$ within one business day; $\geq 99\%$ stock accuracy
Capex / FTE / commitments / weekly	CFO + HR	CZE+ESP envelope €225k / 5 FTE; all-in cash needs separately forecast

No service baseline or causal uplift estimate is supplied. Validate definitions and compare pilot cohorts with similar centrally served customers.

KPI targets are planning assumptions, not measured outcomes. Return-rate alert is distinct from the scenario's 3%-of-gross refund-cost shock.

Approve the envelope; require evidence before site two

- 1. Reserve Czechia + Spain: €225,000 capex and five FTE.**
- 2. Release Spain after validated cost, service and cash gates.**
- 3. Keep Czechia conditional; use Netherlands as the stress-resilient alternative.**
- 4. Reopen the choice when demand, FX or saving thresholds move.**
- 5. Review realized contribution and committed cash monthly.**

Choosing NLD+ESP instead is reasonable if downside protection is the primary objective: €270,000 capex, six FTE, €166,931 base and €107,630 stress annual contribution.

Evidence gaps: measured demand uplift; net saving scope; site quotes; working capital; ramp and cash realization. These limit certainty and funding release, while the supplied arithmetic is reproducible.

Handover: executive report, formula-linked XLSX, metrics.json, saved raw sources/register, scripts, audit outputs and verification record.
