

Stage a Czechia + Spain service-hub program

STAGE CZECHIA + SPAIN

Approve €225k / 5 FTE in two releases; Spain first, Czechia gated.

BASE ANNUAL CONTRIBUTION

€198,099

after €95,000 recurring fixed cost

LOW CASE

€64,619

positive

STRESS CASE

€32,180

positive; risk alternative is €107.6k

SIMPLE PAYBACK

1.14 y

undiscounted

Funding envelope

€225,000 capex · 5 FTE

€225k below the €450k limit; 2 FTE below the seven-FTE limit. Pair adds country outcomes with no synergy.

Risk-sensitive choice

NLD + ESP earns €31.2k less in base, but €107.6k in stress. It becomes the preferred alternative if the board sets a €50k minimum stress floor and otherwise ranks qualifying options by base contribution.

The shipment base concentrates value in Spain and Czechia

1,254

eligible, distinct shipped orders · 72 reconciled country-month records

€4.08m

gross sales · €2.03m 2025 contribution after returns, COGS and fulfillment

Spain (€421.9k) and Czechia (€397.3k) have the largest country contribution in the synthetic base.

2025 contribution by country

Booked sales, cash and contribution differ. Net sales subtract refunds known by 31 Jan 2026; settlement timing/fees/tax are absent. Contribution further subtracts net COGS and nonrefundable fulfillment; central overhead and future hub cost are excluded.

Strong local economics; no direct market-demand evidence

Czechia

€397.3k

2025 contribution · 13,733 units · 48.7% margin

Hub assumptions: €95k capex, 2 FTE, €40k annual fixed cost, €2.10/unit saving.

Spain

€421.9k

2025 contribution · 13,931 units · 49.6% margin

Hub assumptions: €130k capex, 3 FTE, €55k annual fixed cost, €3.00/unit saving.

Demand evidence gap

Country volume and margins are observed only in the synthetic extract; no city/postcode demand, service-distance, competitor, or installed-base data are supplied.

Population/GDP series are context, not product demand.

Market context: Spain population +2.22% and Czechia +2.18% from 2022–24; GDP per capita in 2024 was \$35.3k and \$31.8k current USD, respectively. Poland population –0.71%; Netherlands GDP per capita \$67.5k.

CZE + ESP leads on base, not on stress floor

Best feasible pairs

Pair	Low	Base	High	Stress	Capex	Fixed/y	FTE
CZE+ESP	€64,619	€198,099	€331,580	€32,180	€225,000	€95,000	5
POL+ESP	€58,562	€186,329	€314,096	€29,264	€240,000	€100,000	6
POL+CZE	€56,856	€178,995	€301,134	-€78,570	€205,000	€85,000	5
NLD+ESP	€43,994	€166,931	€289,869	€107,630	€270,000	€120,000	6

11 of 15 country pairs fit €450k and seven FTE. Defer remains an available €0 option.

Base vs stress across pairs

Base volume uplift is an explicit client assumption, not measured demand. Stress jointly adds refunds equal to 3% of gross sales and 10% net-sales depreciation for PLN/CZK markets.

Use a clear risk threshold to choose the alternative

Base-led recommendation

CZE + ESP: €198,099 / year

€225,000 capex · 5 FTE · 1.14 y simple payback

Low: €64,619 · Stress: €32,180

Closest base alternative, POL + ESP: €186,329 base, €29,264 stress; costs €15k more and uses one more FTE.

Risk floor flips the choice

NLD + ESP: €107,630 stress

It gives up €31,168 in base, adds €45k capex and one FTE. It is the highest-base alternative clearing a €50k stress floor.

CZE + ESP stays first at the 10% / 25% / 40% policy uplifts. Model extrapolation below 10% switches from defer at ~2.62% to Czechia solo, then to CZE + ESP at ~2.85%. The board can set a different stress floor; none was supplied.

Release capital only after observable operating gates

Days	Owner	Actions / dependency	Gate
0–15	COO; CFO / BI	Validate actual order, return, cost, FX and location baseline; site shortlist; no noncancelable lease.	Finance signs refreshed low/base/stress.
16–35	EU Ops; Procurement / HR / Legal	Site and lane diligence; Spain first; confirm capex, staffing, inventory, systems and local compliance.	Spain only if low + stress stay positive and within €130k / 3 FTE.
36–65	Spain Hub Manager; IT / Supply Chain	Limited launch; log promised vs actual delivery, order volume, unit saving, refunds, stock recovery and fixed cost.	Pause scale if service deteriorates or saving <€3/unit.
66–90	COO + CFO; Czech lead	Review rolling 8 weeks; build Czech readiness case; extend pilot if seasonality clouds signal.	Release Czech only if ≥25% volume run-rate, ≥€2.10/unit savings, refund shock ≤3% gross, stress contribution >0, total ≤€225k / 5 FTE.

Owners are proposed roles, not named employees. Site, tax, employment and lease diligence are dependencies; no site-level data were supplied.

Track uplift, savings, refunds, service and cash commitments

Scorecard

- Weekly incremental order units vs baseline; day-90 run-rate needs to support +25% uplift before Czech release.
- Measured fulfillment savings: $\geq \text{€}3.00/\text{unit}$ Spain; $\geq \text{€}2.10/\text{unit}$ Czech.
- Incremental refund shock $\leq 3\%$ of gross sales; report returned and restocked units separately.
- Annualized contribution after local fixed cost positive under stress; capex $\leq \text{€}225\text{k}$ and total staffing ≤ 5 FTE.
- On-time to promise: proposed +5pp vs day-15 baseline by pilot exit; baseline is currently unknown.

Evidence & limits

Order/return/cost/hub inputs are synthetic. Public inputs are archived World Bank 2022–24 population and current-USD GDP per capita and ECB daily reference rates averaged by month.

Returns are included only through 31 Jan 2026; ECB reference quotes are not actual transaction FX. The hub model is additive, undiscounted, annual and unvalidated; it excludes synergy, tax, ramp, working capital and terminal value.

No customer interviews, live account access, actual pilot or measured causal lift.

Decision: stage Spain first; reserve Czech tranche until gate; switch to NLD + ESP if the board adopts a €50k minimum stress floor and otherwise ranks qualifying options by base contribution. Source register and checks in the analytical workbook.
